

Copilot Business Foundations - Learner Prompt Packet

These are the learner-entered prompts from the September 9 class deck. Use only approved sources and tenant-approved Copilot surfaces.

Slide 12 - Prove the grounding boundary

Ask before uploading:

What do we know about Glacierline Systems?

Then upload `boreal_inquiry_thread.docx` and ask:

What is this document about? One sentence, and name your source.

Slide 20 - Build custom instructions by interview

Interview me to build my Copilot custom instructions. Ask me one question at a time about my role, who I write for, my tone, the formats I like, and anything you should always or never do. After 5-6 questions, write my custom instructions in the first person.

Then:

Now save it: open Settings, Personalization, and paste your instructions there.

Slide 22 - Compare quick and complete prompts

File: `boreal_inquiry_thread.docx`

Summarize the boreal document

Then:

Summarize the inquiry thread in `boreal_inquiry_thread.docx` for our cluster-deployment lead who missed it. Cover who Boreal Compute is, what they are asking us to deliver, and every date mentioned. Five bullets, neutral tone.

Slide 25 - Build a reusable end-of-day review

Create for me an EOD review: 1) list any emails I received today still unanswered, classified by urgency; 2) show tomorrow's calendar across all my calendars; 3) flag anything on tomorrow's schedule that needs prep tonight; 4) list any commitments I made in today's sent emails - deadlines, deliverables, follow-ups.

Then:

Save this to Prompt Lab, then schedule it to run every day at 4pm.

Slide 33 - Summarize two working files

Files: `messy_meeting_notes.docx`, `boreal_inquiry_thread.docx`

Summarize the deal review meeting notes in `messy_meeting_notes.docx`: decisions made, action items with owners, and open questions. Table format.

Summarize the thread in `boreal_inquiry_thread.docx` into: what changed, what they need from us, and the single next step.

Slide 35 - Draft and refine the reply in Word

File: boreal_inquiry_thread.docx

Draft a reply to Boreal Compute confirming we can scope their 2,000-GPU cluster deployment for Q4. Confident tone, under 150 words, end with two concrete next steps.

Then:

Tighten to 120 words and address their fault-tolerant edge question directly.

Slide 36 - Build the project brief in Word

File: messy_meeting_notes.docx

Turn the meeting notes in messy_meeting_notes.docx into a one-page project brief: objective, milestones with dates, owners, and top three risks.

Slide 37 - Teach Copilot your email voice

Review my last 25 sent emails in my Sent folder and write up for me my voice custom instructions I will use for future draft emails.

Then:

Now open Settings, Personalization, and paste these as my custom instructions.

Slide 43 - Retarget for two readers

Rewrite the project brief you just built as a status update for our deployment engineering lead: keep every technical fact, add cluster-phase and fault-tolerant-edge specifics, bullet format.

Rewrite the same brief as a status update for the CFO: lead with timeline confidence and cost exposure, no hardware detail, five sentences maximum.

List every name, number, and date across both versions so I can confirm nothing changed.

Slides 45-47 - Core lab

Create

Using the three source sections in this document, write exactly five sentences: 1. Overall status. 2. Timeline confidence. 3. Single top risk. 4. Business impact if that risk occurs. 5. Recommended next action. Use only facts in this document.

Refine

Polish this status update for executive readability. Keep exactly five sentences in the same order. Make each sentence concise and specific. Preserve every name, number, date, and fact. Make the top risk and recommended next action unmistakable. Do not add new information.

Verify and fix

Audit every claim in this five-sentence update against the three source sections. For each claim, give the source evidence, status (Supported, Partly Supported, Unsupported, or Recommendation/Judgment), and correction needed. Check dates, numbers, status, timeline confidence, risk, impact, and cause-and-effect statements. Then return a corrected five-sentence update using only supported facts. Label recommendations clearly. If a source does not answer something, say so. Do not infer or invent.

Slide 48 - Optional challenge

Prepare three leadership-review slides: status/timeline, risk/impact, and recommendation/decision. Add three likely questions with source-grounded answers. Mark missing answers: "Not provided in the source."
