
MASS MUTUAL

M365 Copilot Business Foundations

Scott Hay · Delivered with Max Training

Copilot Business Foundations

AGENDA

The next four hours

01 Meet your Copilot

Where it lives, what it sees, the enterprise data boundary

02 Prompting for outcomes

The GCSE pattern - then save, speed, share, and remember

03 Everyday workflows

Summarize, draft, and plan on a live deal

04 Shape it, then ship it

Refine output for format, tone, and audience

05 The applied lab

Assemble the full ICEBERG deal file yourself

MISSION BRIEFING

Project ICEBERG

One deal runs through the whole session - every module adds one piece to the file.

The deal - Boreal Compute, a neocloud startup, wants a 2,000-GPU cluster deployed by Q4

The deal file - thread summary, drafted response, project brief, exec status update

Your mission - build all four artifacts with Copilot - then reuse the moves Monday

THE VALUE SHIFT

AI clears the drag.
Humans raise the value.

— The tool creates capacity. Your choices create value. —

WHY THIS MATTERS

The value shift

Use Copilot to remove friction below the line, then invest your capacity where human value rises.

Delegate friction - searching, summarizing, formatting, first drafts, and context switching

Protect your strengths - judgment, relationships, strategy, craft, and accountability stay with you

Reinvest the gain - name where the reclaimed hour goes: thinking, learning, leading, or innovating

MODULE 1 | 40 MIN

Meet your Copilot

Where it lives, what it sees, and the boundary that protects the tenant.

1

The Model

A large language model hosted by Microsoft.

2

Microsoft Graph

Your email, files, meetings, and more - permission-trimmed to you.

3

The Apps

Word, Excel, PowerPoint, Outlook, Teams - where you work.

Bringing AI, your work context, and the apps you use together.

MODULE 1 - CONCEPTS

What Copilot actually is

Three parts working together - nothing more mysterious than this.

The security answer - this diagram is the answer to every security question you'll be asked - Copilot only reaches what you can already open

Where Copilot shows up

Same engine everywhere - each surface shapes what it does best.

The Copilot app

Desktop + mobile - your front door. Windows, web, and phone: capture and ask anywhere.

Teams + Chat

Meeting recaps, thread catch-up, cross-app questions.

Word + Outlook

Drafts, rewrites, summaries, email coaching.

Excel + PowerPoint

Table analysis, trends, decks from documents.

 Copilot Chat also lives in the browser at m365.cloud.microsoft - same sign-in, same protections.

Use your voice

Every door we just toured also opens hands-free.

Voice dictation

Tap the mic and speak any prompt - anywhere you can type one. Long context is faster said than typed.

Voice mode

A real back-and-forth conversation in the Copilot app - think out loud on the walk between meetings, it talks back.

 Same sign-in, same permissions, same boundary - voice is another door, not another Copilot.

How power users run Copilot

How a prompt becomes an answer

Work IQ, Web, or model-only?

Three sources an answer can stand on - and in the new Copilot design you control each one.

Work IQ (on)

Grounds the answer in your files, mail, chats, meetings - permission-trimmed. The Work IQ button, top-left of Chat. On = your world.

Web

The open internet for market scans and public facts. Controlled separately in Copilot personalization settings - can be turned off per user.

Model-only

Work IQ off (and Web off): Copilot answers from the model alone - no citations. Fine for drafting; label it when you share.

New design: Work IQ toggles your data. Old Work/Web buttons are going away - name what you see, on their build.

Prove the boundary, together

We do this together

- Confirm Work IQ is on (older build: Work selected)
- Ask BEFORE uploading - see the empty hands
- Upload the file, ask again, click the citation

DO THIS IN ORDER

1

What do we know about Glacierline Systems? (ask this BEFORE uploading - expect nothing)

2

Now upload boreal_inquiry_thread.docx, then ask: What is this document about? One sentence, and name your source.

Pick your speed

Auto

The default - it picks for you. Leave it here 80% of the time.

Quick response

Lookups, rewrites, short summaries - seconds, not minutes.

Think Deeper

Analysis, comparisons, multi-step reasoning - anything you would hand to an analyst.

Speed changes how long Copilot reasons before answering - never what it knows or can see.

MODULE 2 | 55 MIN

Prompting for outcomes

A repeatable pattern - and the ladder that makes it yours.

The Copilot investment ladder

MODULE 2 - ANATOMY

Anatomy of a strong prompt

Strong prompts share three visible habits - you can audit them at a glance.

Names the job - summarize, draft, compare, plan
- a verb with a deliverable

Names the source - this thread, this file,
yesterday's deal review

Names the format - five bullets, a table, 150
words, neutral tone

The GCSE prompt pattern

The diagram illustrates the three components of a Copilot prompt, arranged horizontally. Each component is represented by a dark gray rounded rectangle with a light gray circular icon at the top left. The first rectangle, titled 'Yourself', has a person icon and describes custom instructions. The second rectangle, titled 'The Agent', has an asterisk icon and describes the persona Copilot plays. The third rectangle, titled 'The Target', has a person icon and describes who receives the output. Arrows indicate the flow from 'Yourself' to 'The Agent' and from 'The Agent' to 'The Target'.

Component	Icon	Description
Yourself	Person icon	Custom instructions - set once in settings, inherited by every prompt. Do this first.
The Agent	Asterisk icon	The persona Copilot plays - most prompts open with 'act as a...'. <i>(Note: The asterisk icon in the image is a stylized six-pointed star, not a standard asterisk.)</i>
The Target	Person icon	Who receives the output - their altitude and what they will do with it.

Tell Copilot about you

Where

Settings (three dots by your name) > Personalisation - two clicks, set once.

What to write

Your role, your default audience, style preferences, format quirks.

What happens

Every prompt inherits it - teach it once, benefit always.

Level up

Different voices for different audiences - execs vs team vs customers.

FOLLOW ALONG - 5 MIN

Let Copilot interview you

What you are practicing

- Copilot builds your profile by asking, not guessing
- Answer 5-6 questions in plain language
- Paste the result into Settings > Personalization
- Layer three of context, set once - every future prompt inherits it

PASTE THIS, THEN ANSWER

1

Interview me to build my Copilot custom instructions. Ask me one question at a time about my role, who I write for, my tone, the formats I like, and anything you should always or never do. After 5-6 questions, write my custom instructions in the first person.

2

Now save it: open Settings, Personalization, and paste your instructions there.

Quick ask or GCSE build?

Quick ask

- Lookups and simple recaps
- Low stakes, easy to verify
- One line is fine

GCSE build

- Anything a customer or exec sees
- Deal files, briefs, status updates
- All four letters, every time

Rule of thumb: if the output leaves your screen, it deserves the full GCSE treatment.

Quick vs complete, side by side

We run both, then compare

- Prompt 1: the quick ask - fine, but vague
- Prompt 2: the complete GCSE ask - specific and dated
- Same source, very different answers - that gap is the skill
- Save the five bullets: artifact 1 of your deal file
- File: boreal_inquiry_thread.docx (already uploaded)

RUN THESE IN ORDER

1

Summarize the boreal document

2

Summarize the inquiry thread in boreal_inquiry_thread.docx for our cluster-deployment lead who missed it. Cover who Boreal Compute is, what they are asking us to deliver, and every date mentioned. Five bullets, neutral tone.

Prompt traps that flatten output

Stacked questions

Three asks in one prompt gets you three half-answers.

Vague source

The data means nothing - name the file, thread, or meeting.

No format ask

Skip Expectations and you get a wall of prose.

Restarting

Refine the last answer - do not open a new chat and start over.

Make your best prompts reusable

A prompt you keep is worth ten you retype.

Save it

One click in Prompt Lab turns today's best ask into tomorrow's shortcut.

Schedule it

Recurring prompts run on a clock - your Monday recap, ready when you sit down.

Curate five

Your Top-5 card is the starter library - keep the winners, retire the rest.

Prompt Lab is the new name for Prompt Gallery - same feature, one name on stage today.

Build a reusable EOD review

What you are practicing

- Run a real end-of-day review prompt
- Save it to Prompt Lab - one click
- Schedule it to run at 4pm daily
- One good prompt, working for you every afternoon

RUN, THEN SAVE, THEN SCHEDULE

1

Create for me an EOD review: 1) list any emails I received today still unanswered, classified by urgency; 2) show tomorrow's calendar across all my calendars; 3) flag anything on tomorrow's schedule that needs prep tonight; 4) list any commitments I made in today's sent emails - deadlines, deliverables, follow-ups.

2

Save this to Prompt Lab, then schedule it to run every day at 4pm.

MODULE 2 - CREATE

Create images in Copilot Chat

Describe the image you need - Copilot drafts it in the chat, ready to refine like any answer.

Ask for it - name the subject, the style, and where it will be used

Refine it - same rule as text - iterate on the result, do not restart

Own it - brand, accuracy, and taste stay your call before it ships

MODULE 2 - SHARE

From answer to shared page

Edit in Pages turns a chat answer into a living document your team co-authors beside the chat.

Lift it - one click moves the answer out of the chat into a page

Invite them - colleagues edit the same page with you, live

Keep asking - Copilot stays beside the page for every next pass

When the agent needs to remember your data

The top of the ladder: the context stops living in one conversation.

Notebooks

A standing, grounded working set - your files stay attached across sessions.

Agents

Instructions, knowledge, and persona saved once - a teammate you configured.

Session 2

We build with both next time - today you know they exist and why.

Everything below this rung is an ask you make - this rung is a capability you keep.

BREAK

**Break - back in 15
minutes**

MODULE 3 | 50 MIN

Everyday business workflows

Two moves that pay every day: curate what exists, generate what doesn't.

Two moves that pay daily

Almost everything you do with Copilot is one of these - or both in one prompt.

Summarize (curate)

Threads, meetings, documents - pull out what matters: decisions, actions, owners, dates.

Draft (generate)

Replies, documents, briefs - create what isn't there yet, from a summary or messy notes.

One curates what already exists, one generates what doesn't - and you can chain both in a single prompt.

Summarize anything in four beats

Point

name thread or
meeting

Ask

GCSE summary
prompt

Verify

names, dates,
numbers

Use

paste where work
happens

Paste this - summarize moves

What you are practicing

- Curate signal out of raw notes and threads
- Structure demanded: a table, named sections
- Files: messy_meeting_notes.docx, boreal_inquiry_thread.docx

PASTE THIS

1

Summarize the deal review meeting notes in messy_meeting_notes.docx: decisions made, action items with owners, and open questions. Table format.

2

Summarize the thread in boreal_inquiry_thread.docx into: what changed, what they need from us, and the single next step.

Draft in Copilot Chat, Word, or Outlook

Same engine, three rooms - where the draft starts depends on where it will live.

Copilot Chat

Exploring - no destination yet. Think out loud, shape the idea, then move it where it will live.

Word

Document deliverables - build from a summary or notes, with room to iterate before anyone sees it.

Outlook

The message itself - replies inside the live thread, plus a coaching pass on your tone.

 The tell: no destination yet - Chat. A document deliverable - Word. The message itself - Outlook.

Draft the reply - in Word

What you are doing

- Everyone works in Word, so we all follow along together
- Ground it with boreal_inquiry_thread.docx (or your summary)
- Draft, one refine pass - then an optional Outlook coaching pass to send
- This is artifact 2 of your deal file

RUN THESE IN WORD

1

Draft a reply to Boreal Compute confirming we can scope their 2,000-GPU cluster deployment for Q4. Confident tone, under 150 words, end with two concrete next steps.

2

Tighten to 120 words and address their fault-tolerant edge question directly.

Build the project brief - in Word

What you are doing

- The brief IS a Word document - a deliverable, not a message
- Open messy_meeting_notes.docx - deliberately messy, like real notes
- Draft with Copilot, then verify milestones and owners
- This is artifact 3 of your deal file

RUN THIS IN WORD

1

Turn the meeting notes in messy_meeting_notes.docx into a one-page project brief: objective, milestones with dates, owners, and top three risks.

FOLLOW ALONG - 5 MIN

Teach Copilot your email voice

What you are practicing

- Copilot reads your Sent folder and writes your voice profile
- Paste the result into Settings > Personalization
- Every future draft now sounds like you, not a robot
- This is custom instructions (layer 3) - built by your own emails

RUN IT, THEN SAVE IT

1

Review my last 25 sent emails in my Sent folder and write up for me my voice custom instructions I will use for future draft emails.

2

Now open Settings, Personalization, and paste these as my custom instructions.

Workflow traps that bite

Unverified names

A summary with the wrong owner ships a wrong promise.

Draft equals send

Copilot writes the draft - you own the send button.

No transcript

No transcription, no recap - turn it on before the meeting.

Scratch-free work

Artifacts pasted nowhere are artifacts lost - keep the deal file open.

MODULE 4 | 30 MIN

Shape it, then ship it

Five refinement moves, one grading habit.

The five refinement moves

Tighten

Shorter, denser, no filler.

Reformat

Bullets to table, prose to plan.

Retone

Confident, neutral, warm - name the tone you want.

Retarget

Rewrite the same facts for a different reader.

Verify

Names, numbers, dates - human eyes, every time.

The traffic light check

Grade every output in thirty seconds before it travels.

Green - use

Facts verified, tone right, ship it.

Yellow - verify

Right shape, unchecked names, numbers, or dates.

Red - redo

Wrong job or wrong source - fix the prompt, not the prose.

Yellow is the default state of every fresh Copilot answer - green is earned, never assumed.

Engineer reader or CFO reader?

Engineer

- Specs, throughput, rack details
- Memory-module part specifics
- Wants the how

CFO

- Cost, risk, timeline
- Q4 revenue impact
- Wants the so-what

Same facts, different altitude - the retarget move rewrites the altitude, you keep the facts.

Retarget for two readers

What you are doing

- Start from the project brief you just built - refine, never restart
- Recast it as a status for the engineer, then the CFO
- Same facts, new altitude - verify nothing changed
- The CFO version is artifact 4 - the exec status update

RUN THESE IN ORDER

1

Rewrite the project brief you just built as a status update for our deployment engineering lead: keep every technical fact, add cluster-phase and fault-tolerant-edge specifics, bullet format.

2

Rewrite the same brief as a status update for the CFO: lead with timeline confidence and cost exposure, no hardware detail, five sentences maximum.

3

List every name, number, and date across both versions so I can confirm nothing changed.

MODULE 5 | 35 MIN

Three sources. One working document.

For this lab, the key documentation is already together in Word. In real work, attach sources to Copilot Chat or let Copilot find authorized work data.

CREATE

Run the first prompt

- Open the starter in Word
- Run the prompt exactly
- Paste the result under section 4

RUN THIS PROMPT

1

Using the three source sections in this document, write exactly five sentences: 1. Overall status. 2. Timeline confidence. 3. Single top risk. 4. Business impact if that risk occurs. 5. Recommended next action. Use only facts in this document.

REFINE

Polish without changing truth

- Run this on the five-sentence draft
- Keep the same five-part order
- Do not add names, numbers, dates, or facts

RUN THIS PROMPT

1

Polish this status update for executive readability. Keep exactly five sentences in the same order. Make each sentence concise and specific. Preserve every name, number, date, and fact. Make the top risk and recommended next action unmistakable. Do not add new information.

VERIFY CLAIMS & FIX

Audit before you send

- Run this on the refined update
- Classify every claim against the sources
- Use the corrected five-sentence version

RUN THIS PROMPT

1

Audit every claim in this five-sentence update against the three source sections. For each claim, give the source evidence, status (Supported, Partly Supported, Unsupported, or Recommendation/Judgment), and correction needed. Check dates, numbers, status, timeline confidence, risk, impact, and cause-and-effect statements. Then return a corrected five-sentence update using only supported facts. Label recommendations clearly. If a source does not answer something, say so. Do not infer or invent.

OPTIONAL CHALLENGE | UP TO 10 MIN

Prepare for the leadership review

Prepare three leadership-review slides: status/timeline, risk/impact, and recommendation/decision. Add three likely questions with source-grounded answers. Mark missing answers: 'Not provided in the source.'

Professional finish - Three-slide outline. Three likely questions. Answers are grounded or explicitly marked not provided.

WRAP - THE MENTALITY

The hour you save is only raw material

Productivity becomes value only when reclaimed time is deliberately reinvested.

Recover - remove one recurring friction point with a grounded, reusable workflow

Reinvest - put the capacity into thinking, learning, leading, or strengthening relationships

Compound - turn what worked into prompts, templates, and workflows that improve the next cycle

Your Monday morning picker

WHEN YOU NEED	OPEN THIS AND SAY
To catch up fast	Chat (Work): summarize [file or thread] - five bullets, citations
A missed meeting	Teams: recap the meeting - decisions, actions, owners, table
A first draft	Word: using this summary, draft the reply - tone, length, next steps
An inbox under control	Outlook: what needs a reply before [day]? Then a coaching pass
A ship check	Any app: list every name, number, and date so I can verify

Start your Top-5 prompt card

SLOT	SEED IT WITH
1. Daily catch-up	Recap yesterday's meeting: decisions, actions, owners - table
2. Thread triage	Summarize this thread: what changed, what they need, next step
3. First draft	Using this summary, draft the reply - tone, length, next steps
4. Plan from notes	Turn these notes into a brief: objective, milestones, owners, risks
5. Ship check	List every name, number, and date in your answer so I can verify

Your 30-day plan

Three habits, then two workflows, then one share-out.

Week 1

Three daily habits: recap, thread summary, draft-then-refine.

Weeks 2-3

Run two real workflows end to end - your own deal file.

Week 4

Share your best prompt and best save with your team.

The 30-day plan handout has the full grid - name, dates, and a success metric per week.

WRAP-UP

Multiply your contribution

What Copilot carries

Recurring friction: search, summaries, formatting, first drafts, and structured transformation.

What you carry

Judgment, leadership, innovation, relationships, accountability, and the decision to make the work matter.

Copilot availability map

SURFACE	WHERE YOU WILL FIND IT TODAY
Teams	Copilot in chat, channels, and meeting recap
Word / Outlook	Draft, rewrite, summarize, coaching
Excel / PowerPoint	Table analysis, deck creation
Copilot Chat (browser)	m365.cloud.microsoft - Work and Web grounding
File upload in Chat	Supported for common Office and PDF files
Pages and agents	Rolling out - verify in your tenant week-of
